

Loops

They are used to execute a block of code repeatedly until a certain condition is satisfied.

They are two types of loops :-

* for loop * while loop.

Then * nested loop.

- for inside another for loop
- for inside a while loop.
- while inside another while
- while inside a for loop.

1. For loop

* for loop with sequence

Syntax :-

for i in sequence-name:
 statement

eg:- ls = ["A", "B", "C"]

for i in ls:

 print(f"Hi {i}!")

output
=>

Hi A

Hi B

Hi C

In loop, the position always starts in '0'. i.e., position of 'A' in list is '0' and so on.

* for loop with range

Syntax :-

for i in range(start-value, stop-value, step-size)

 default start-value = 0

 " step-size = 1

for eg:- for i in range(0, 10): ~~for~~ some as for i in range(1, 11)

 print("Hello")

output
=>

prints "Hello" 10 times.
